

Herbicide (PCS 02126)

Gallup® Biograde

Contains 360g/l glyphosate acid
as a soluble concentrate

Gallup Biograde sets new standards of safety and efficacy by using novel formulation technology.

For use before the sowing or planting of crops, in stubbles, set-aside, orchards, forestry and non-cropped areas, for the destruction of grassland and for pre-harvest use in cereals and certain other crops. It is translocated from treated vegetative growth to underground roots, rhizomes or stolons.

Key Benefits

- **Non-hazardous COSHH classification**
- **Highest level of performance**
- **Improved rainfastness**
- **Safe for the operator and the environment**
- **Approved for aquatic application**
- **Systemic activity gives total control of roots, shoots, and leaves**
- **Choice of application rates**

Summary of directions for use

- 2 litres/ha annual weeds species only
- 4 litres/ha all annual and perennial weed species
- 5 litres/ha long leys e.g. 4-7 years old with perennial broad-leaved weeds
- 6 litres/ha standard rate for emergent aquatic and mixed weed populations as part of an annual weed control programme
- 6 litres/ha neglected waste ground, high levels of brambles and brushwood and floating aquatic weeds

Gallup Biograde is a foliar-acting herbicide that controls annual and perennial grasses and broad-leaved weeds
